- * Easy to Use,
- * Affordable Web and Video Conferencing Solution is Here!
- * Use Internet Meetings to Reduce Travel Related Costs & Headaches
- * Extend Your Marketing Reach & Make Geography Inconsequential

Holding meetings online is about to become commonplace. Now, anyone with a broadband Internet connection and a browser can log onto the Internet and take part in or host a web conference, a web and video conference or a webinar. Previously it was necessary to download and install complicated Internet meeting software and buy expensive equipment in order to enjoy the convenience of Internet meetings and webinars. Sahara Net Conference has taken web and video conferencing services a step further with new, 100% desktop, browser based web conferencing services and webinar software that does not require any special installation on your computer. Meeting online has never been this easy!

Do you want to keep in touch with employees, business contacts or clients? Sahara Net Conference's video and web conferencing services make it possible for anyone, anywhere in the world to log on and participate in your Internet meeting. The service works on any operating system, Mac, Windows or Linux, and users can take part even if their computers are protected by a firewall.

Video and Web Conferencing Software

- Through its variety of services, Sahara Net Conference provides full-featured and flexible web conferencing software, video chat server and webinar software. Participants can communicate by voice, instant messaging chat and see each other by video/videoconference. This is made possible by the powerful video chat server. With Professional and Enterprise versions of its web conferencing software, Sahara Net Conference includes multipoint, desktop video conferencing software that allows up to 16 individuals to be seen at the same time, and up to an unlimited number of additional web conferencing attendees to see those 16 (depending on the number of seats purchased).

Participants can talk and hear one another by using standard microphones and headsets thanks to Voice over Internet Protocol (VoIP). As an alternative, if you wish, you can choose to use free, integrated

teleconferencing for the handling of audio in your webinars.

Participants can share applications and open and examine common documents while online. Hosts of the conference can show a PowerPoint presentation that will be visible to all attendees. And some versions even allow an operator to remotely control the computer of another participant.

Host Webinars with Easy to use, yet Powerful Webinar Software

- The uses of Sahara Net Conference's web and desktop video conferencing systems are limited only by your imagination. Companies are presently using Sahara Net Conference services to hold Internet meetings (videoconferencing), demonstrate their products and services to potential clients, conduct staff training sessions and even perform after-sales servicing of their products and software (by using remote desktop control software).

Educational, social and religious organizations are using Sahara Net Conference's webinar services to connect with students and members at a distance. Many organizations are using the webinar hosting features to conduct virtual, web based meetings and seminars.

An Affordable Conferencing System

- Online conferencing will not break your budget! In fact, when you add up the travel costs that you will save when you hold meetings online, the costs of this service become negligible. Sahara Net Conference is available in three versions, suited to individuals, small companies, large organizations and companies.

Sahara Net Conference offers superior Web and Video Conferencing solutions at a fraction of the cost. Try one of our online demos now and find out how this service can help bring your organization together, boost morale, raise efficiency, improve team work and lower your travel costs. What's Unique about Sahara Net Conference

Find out what real clients have to say about the wide variety of video conferencing solutions for business and personal use that Sahara Net Conference offers.

- With 100-percent browser-based solutions, Sahara Net Conference offers high-end Video & Web Conferencing systems at a much more manageable price than such competitors as WebEx, Polycom and NetMeeting servers. There is no software to download, install or configure. Sahara Net Conference hosts meetings, presentations and trainings over the web - in REAL TIME. Unlike WebEx, Polycom and Netmeeting servers, our multipoint video capability allows up to 16 separate individuals to be seen at the same time, and an unlimited number of additional Video Conferencing attendees join the meeting as well. Sahara Net Conference enables unlimited Web & Video Conferencing software at a fraction of the cost of companies such as WebEx, Polycom and NetMeeting servers
